Figures showing ulceronodular lesions in an advanced case of 'Mycosis Fungoides'

An adult male presented with history of long standing scaly cutaneous lesions, progressed to multiple ulceronodular lesions on back of arm, front of thigh as shown in figure. Histopathology of lesion revealed non-Hodgkins lymphoma(CD4 +v)-Mycosis Fungoides His TNM stage was stage III-T3N1M0. Patient needed systemic multiagent chemotherapy to palliate his advanced disease.
